Cloud & Network Security Intelligence Dashboard

This dashboard provides a unified view of authentication activity, cloud service operations, and network flow data to deliver end-to-end visibility across your cloud environment. It enables real-time monitoring, anomaly detection, and security analysis to identify access patterns, detect potential threats, and ensure compliance across cloud-based services and network infrastructure.

Top Users by Login Attempts - Highlights users with the highest numb...

Network Traffic by Protocol - Shows the breakdown of traffic based on n...

Protocol Usage Trend Over Time - Tracks activity trends for each protocol over time.

Cloud Service Traffic Volume Over Time - Displays the number of cloud service connections over time.

Top Source-to-Destination Pairs - Shows which internal IPs are talking to which cloud endpoints.
